Michael Shokoya

Software Developer | www.michaelshokoya.com | soft-node-dev@outlook.com | 07949835112

Programming - NodeJS - 6yrs

Expertise - Express, React, Docker, Kubernetes, HTML/CSS/Javascript, Microservices, Kafka, Mongodb + More

Career Objective

Seeking a full stack software developer position where I can best utilize and challenge my existing knowledge and learn new skills whilst developing and an engineer and an individual.

Key Skills

- Ability to grasp new concepts/technologies/frameworks and implement them very quickly
- Ability to analyze , design and develop large-scale, complex client/server side web based applications
- Able to optimise code for better performance and code quality
- Ability to adapt to any working environment and connect with people instantly

EXPERIENCE

OJ Solutions — Full Stack *Software Developer*

develop and implement modules for Drupal to facilitate a content moderation workflow and trigger sending emails on various content states to alert admins of activity. (Stack: Drupal, Vuejs, Nodejs)

Atrice — Fullstack *Software Developer*

Developed a full stack web application allowing authenticated managers & employees enter their work hours towards a project on a monthly basis which allowed directors to better track employee utilisation metrics. (Stack: Nodejs, React, EC2, Postgres)

Penta Technology — Backend *Software Developer*

I was hired to work on a car finance system to help customers obtain loans from brokers. The application utilized the domain driven design methodology and event driven architecture. I was assigned to work on a domain that helped staff review, approve or reject a customer's application. (Stack: Nodejs, Vue, mongoDB, Nest.js)

OJ Solutions — Full Stack *Software Developer*

I was contracted on different occasions to participate on the development of multiple projects such:

1. Cloud based phone system using nodejs, postgres, socketIO, webRTC, redis and react + more
   a. I implemented a click to call feature for the chrome extension
   b. I handled user management features allowing users to change details and manage permissions on a administrator level
   c. I helped implement a feature to block inbound calls from selected numbers

2. A ecommerce startup working with nodejs, microservices, redis, postgres, nextjs
   a. I helped refactor the application from a monolith into a microservice based architecture
   b. I advised and contributed towards recatoring to implement the CQRS pattern
   c. I implemented parts of the users orders section of the website with react/nextjs

3. Real time text editor with voice chat with nodejs, mongodb, redis, socketIO, webRTC + more
   a. I helped with the implementation of authentication and authorization (register + login)
   b. I helped implement the save code feature which allows you to save a snapshot of the code
   c. + more

EDUCATION

University Of Bradford, UK — Bsc *Accounting & Finance*

September 2011 -May 2014

Received 2.1 Bachelor Of Science. The course taught me discipline and how to be an effective leader amongst many other things

PROJECTS

Pin Drop

https://github.com/mshokoya/Pin-drop

This application was built for tourists and travel liberated people. Its an app that pins popular tourist spots in selected cities or countries

Chop City

https://github.com/mshokoya/recipe-website

This project is a recipe website that allows people to share and find recipes

Tiny House

https://github.com/mshokoya/hotel-booking-app

This project is an airBNB clone. It allows people to book vacation rentals
